weDeliver is the crowdsourced "on-the-way" technology-driven delivery service for businesses in the MENA region.

PROJECTS

Public Transportation Website
- My graduation project with my teams Fatima Ahmed and Mais Mohamed for a Bachelor's degree in Computer Systems Engineering Birzeit University.
- The project is a vehicle reservation system website that provides a ride-on-demand service that connects passengers with motorists.
- The main objective of the project is to provide an easy-to-use and handy website which enables them to reserve a seat in vehicles from the University locations to any location in Ramallah and back.
- The project includes booking different vehicles (buses, van, taxis) according to the customer's request and convenience, as the customer is allowed to reserve the number of seats he wants.
- The website was implemented through three interfaces: the passenger interface, the driver interface, and the admin interface.
- We have been working on the following technology stack: Visual Studio Code, HTML ,CSS, Bootstrap, JavaScript, PHP ,SQL database , Laravel framework.
